## **Prep Sheet for Bed Bug Heat treatment**

Proper preparation is crucial for the success of your treatment for bedbugs. With your help, our technician team will solve your issue. Please make sure all preparations are completed for your service appointment.

Very little, if anything should be removed from the environment prior to the heat treatment.

- All electronics must be unplugged, including computers.
- All prescription drugs should be stored in the fridge during the treatment.
- All fruits such as apples and bananas should be stored in the fridge.
- Heat susceptible furniture (bamboo, wicker) should be marked so technicians are aware. These will have their own individual heat sensor or can be removed from the environment if required.
- Candles and wax figures and sculptures should be placed separately as they will be inspected and removed from the environment so they will not melt.
- All combustibles must be removed from the environment. (Examples: Gas lanterns, oil lamps, fireworks, ammunition, barbeque lighters)
- All pressurized cans, cylinders and bottles must be removed. (Examples: aerosol bug sprays, fire extinguishers, lighters, perfume, deodorant.)
- Oil paintings and anything of high personal and sentimental value should be separated for technicians to inspect and treat appropriately.

You can expect technicians to be on site 7-12 hours to complete this type of service.

High quality mattress and box spring encasements are always recommended to prevent future problems.

*Thank You for choosing GT Pest Control!*
